WHY THIS MATCH WORKS

Based on your neutral foot type and pronation pattern, neutral cushioned shoes provide a balanced ride. At 30 km/week targeting half-marathon distance on road, maximum cushioning protects your joints over repeated mileage while remaining responsive enough for tempo work and race-pace segments.

SHOE ROTATION STRATEGY

Rotate three purpose-built shoes to reduce injury risk and extend the life of every pair.

Research shows multi-shoe rotation reduces injury risk by up to 39% (British Journal of Sports Medicine)

YOUR RUNNING PLAYBOOK

A 4-block playbook tailored to HALF MARATHON on road at 30 km/week.

14-DAY SHOE BREAK-IN PROTOCOL

- DAYS 1-3

Walk 15 minutes indoors. Check for hot spots and lacing pressure.
- DAYS 4-7

Easy run 3–5 km at conversational pace. No speed work yet.
- DAYS 8-11

Two easy runs of 5–8 km. Add 4×20s strides on the second run.
- DAYS 12-14

Long run up to 60% of weekly peak. Shoes are now race-ready.

FORM & CADENCE CUES

- Target 170–180 steps/min — short, light, quiet.
- Land under your hips, not out in front. Imagine pulling the ground back.
- Relax shoulders. Hands soft, elbows at ~90°.
- Exhale on the foot strike of your weaker side to balance breathing.

YOUR 4-WEEK PROGRESSION

WEEK	EASY DAYS	QUALITY SESSION	LONG RUN
WK 1	3 × 5 km easy	4 × 400m strides	12 km easy
WK 2	3 × 6 km easy	6 × 400m @ 5K pace	15 km steady
WK 3 (peak)	3 × 7 km easy	20 min tempo @ threshold	22 km long run
WK 4 (taper)	2 × 5 km easy	3 × 1km @ goal pace	12 km easy

INJURY-AWARE COACHING NOTES

Glute medius work (clamshells, side planks) 3×/week. Avoid sudden mileage jumps >10%/week. Run on level surfaces.
